

# Take Your BMW to the Next Level: Complete Delete Kits for E70 and X5 Models

If you're looking to take your BMW to the next level of performance, consider investing in a complete delete kit. These kits are designed to remove restrictive components from your vehicle's exhaust system, which can increase horsepower and torque, improve the sound, and enhance the overall driving experience.

For the 2013 BMW E70 and X5 models, two different types of complete delete kits are available: the [2013 BMW E70 Complete Delete Kit](#) and the

2013 BMW X5 Pipe Delete Kit. The E70 Complete Delete Kit includes the following:

- The removal of the diesel particulate filter (DPF).
- Diesel oxidation catalyst (DOC).
- Selective catalytic reduction (SCR) system.

At the same time, the X5 Pipe Delete Kit removes the resonator and replaces it with a straight pipe.

Removing these components can increase exhaust flow and reduce backpressure, resulting in better fuel economy, faster acceleration, and improved engine responsiveness. Additionally, removing the DPF and SCR systems can reduce maintenance costs and increase the lifespan of your vehicle's engine.

The 2013 BMW E70 Complete Delete Kit and the 2013 BMW X5 Pipe Delete Kit are made from high-quality materials. They are designed to replace your vehicle's original exhaust components directly. This means that installation is straightforward and can be done by a professional mechanic or DIY enthusiast with some experience.

Overall, a complete delete kit is worth considering if you're looking to get the most out of your 2013 BMW E70 or X5. Not only can it improve performance and sound, but it can also help to reduce maintenance costs and increase the lifespan of your vehicle's engine. So why wait? Upgrade your BMW today with a complete delete kit.
